

Bear Finance

Introduction

Bear Finance is a second-generation yield farm on Binance Smart Chain with a unique two tokens model centered around the **BEAR** token, which is a limited supply deflationary governance token.

TEDDY is the rewards token that will be used to access the majority of yield farms that provide high yields in the form of more **TEDDY**. **BEAR** will be used to provide access to exclusive farms with enhanced rewards, as well as promotions and governance activities designed to maximize return to **Bear Finance** users and increase the value of **BEAR**.

Bear Finance will also include a Lottery system and an NFT ecosystem that is both engaging, practical, and profitable.

Tokenomics Basics

BEAR Supply is only 200 coins with a rapid rewards halving schedule to severely limit supply and ensure value increases over time.

TEDDY supply will be controlled primarily by utilizing buybacks from deposits into Yield Farms, as well as through the Lottery system and NFT ecosystem.

Security Basics

BEAR and **TEDDY** both have migrator code removed, and liquidity has been timelocked for 5 months with additional 5 months vesting.
